TeleTracking | CARE DELIVERY

By expanding Capacity Management Suite® functionality from desktop to mobile, you can:

- Improve communications across service lines
- Enable nurses to spend more time at the bedside
- Streamline hand-offs between nursing, transport and EVS
- Increase time-to-accept rates for EVS and Transport jobs

Mobile Applications

For Capacity Management Suite®

Whether you are responsible for supervising a nursing unit, caring for patients at the bedside, cleaning beds or transporting patients, TeleTracking's role-based mobile apps extend the use of Capacity Management Suite to your workforce in real-time. Equipped with the capability to drive workflows and provide real-time visibility into hospital operations, the mobile applications for Capacity Management Suite enable your staff to perform their jobs while on-the-go. At their fingertips, staff can monitor changing conditions, execute transport assignments, communicate to other care teams, or adjust hospital operations.

Highlights

- Simple, Intuitive dashboards provide at-a-glance insights with the ability to drill down for further analysis.
- Dark themed visuals provides a better experience for low light environments, minimizing patient disturbance from bright screens in dark rooms.
- Secure messaging allows care teams to communicate and collaborate in real-time no matter where they are in the facility.
