

**With Workflow IQ® you can:**

- Provide simple, real-time visibility to 'day-of' workflow
- Track patient, staff, and procedure status in real-time for better utilization of resources and operating performance
- Eliminate inefficiencies and automate workflow between care settings
- Increase on-time starts, speed room turnover & add more cases

## Workflow IQ®

Protect your investments by improving strategic and organizational planning to optimize the workflows inside and outside the four walls of the acute care setting.

Procedural services are an economic engine generating up to half of a hospital's revenue, but many lack the visibility and operational efficiency to truly capitalize on the lucrative Procedural space. Cases being delayed because patients aren't prepped for procedures, or the rooms aren't available after the prior case are just a few of the reasons these types of procedures can remain dormant during prime-time hours. With Workflow IQ, you can capture previously unproductive capacity to grow revenue generating surgical services without adding new Procedural space.

### Improve Patient Flow, Productivity & Safety

Inefficient workflows and the inability to track patient, staff and procedure status in real-time commonly lead to low utilization of resources and poor operating performance. TeleTracking's workflow solution addresses these common challenges by providing real-time visibility to procedure status, streamlining patient flow, and delivering intuitive visual cues to let clinicians and nursing staff manage their time more effectively.

### Manage Care Coordination

Automated milestone checklists mean staff throughout the phases of care know exactly where their patients are in the process and can better plan for when the patient will progress to the next phase. This reduced reliance on phone calls helps to elevate bottlenecks and improve the coordination between procedural departments meaning they can spend less time on administrative tasks and more time caring for their patients.

## Achieve Operational Excellence with Workflow IQ

Patient wait times under  
**90 MINUTES**

**>85%**  
of on-time starts

**80%+**  
prime-time  
utilization

Room turns in under  
**25 MINUTES**

### Workflow IQ addresses five primary procedural challenges including:

#### Productivity

- Improve on-time starts
- Reduce room turnover times
- Efficiently track procedure progress & milestones

#### Safety

- Automate procedural milestone checklists
- Improve communication of patient status, handling and treatment
- Reduce delayed/cancelled procedures

#### Financial Performance

- Increase surgical volume
- Improve prime-time room utilization
- Add more cases per room

#### Employee Satisfaction

- Enhance coordination between surgical teams & units
- Improve reporting compliance
- Reduce distractions & phone-calls

## Workflow IQ Software

The centrally-hosted solution eliminates the need for costly servers, reduces reliance on in-house IT resources, and includes industry-leading system stability. The cost-effective, capital budget friendly infrastructure means we can implement your solution, and have you realizing the benefits sooner than traditional on-premises software.

TeleTracking is an integrated healthcare operations platform that is expanding the capacity to care by combining comprehensive technology solutions with clinical expertise to optimize access to care, streamline care delivery and connect transitions of care. We understand that for every hour a patient waits for care they face objectively worse outcomes; so our mission is simple, to ensure that no one waits for the care they need.
